EDUCATION

•B.E. – Computer Science and Engineering

2022 – 2026

Sengunthar Engineering College (Autonomous), Tiruchengode, Tamil Nadu

CGPA: 8.7/10

INTERNSHIP EXPERIENCE

•Data Science Trainee

Dec 2025 – Present

QSpiders

Bangalore

- Developed and delivered 5+ end-to-end data analysis projects using Python, SQL, and Scikit-learn, covering the full data pipeline from ingestion to model deployment.
- Cleaned and processed datasets of 10,000–50,000 records using Pandas and NumPy, reducing missing values by 40% and improving data quality for downstream analysis.
- Performed exploratory data analysis (EDA) and feature engineering on structured datasets, uncovering 3–5 key business insights per project through statistical pattern recognition.
- Built interactive Power BI dashboards with Power Query transformations and DAX measures, reducing manual reporting time by approximately 30% for business stakeholders.
- Wrote optimized SQL queries to extract, transform, and aggregate data from relational databases, supporting weekly KPI tracking and business intelligence reporting.
- Collaborated in a team environment using Git/GitHub for version control, maintaining clean commit history across all projects.

PROJECTS

•House Price Prediction

Regression-based ML pipeline using feature engineering and ensemble models.

GitHub

- Built an ML pipeline to predict house prices achieving an R^2 score of 0.87, using feature engineering (encoding, scaling, outlier removal) on a dataset of 20,000+ records.
- Implemented and compared Linear Regression vs. Random Forest using Scikit-learn; Random Forest outperformed baseline by 22% on RMSE.
- Reduced dimensionality by 35% through correlation analysis and feature selection, improving model performance and training speed.
- Technology Used: Python, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, ML Pipelines, Feature Engineering, Regression Analysis.

•Citizen Health Analysis

EDA and visualization on citizen health datasets to identify lifestyle patterns and risk factors.

GitHub

- Analyzed a dataset of 15,000+ citizen records, identifying significant correlations between BMI, blood pressure, and diabetes risk ($p < 0.05$).
- Performed end-to-end data cleaning – handling 12% missing values, removing duplicates, and standardizing 20+ health indicator columns – achieving a 95% clean dataset.
- Generated 15+ visualizations (heatmaps, distribution plots, box plots) communicating lifestyle trends; patients with BMI > 30 showed 2.4× higher heart disease risk.
- Technology Used: Python, Pandas, NumPy, Matplotlib, Seaborn.

•IBM HR Attrition Dashboard

Interactive Power BI dashboard to analyze employee attrition trends and support HR decisions.

GitHub

- Built an interactive Power BI dashboard analyzing attrition across 1,470 records with 35 HR attributes, enabling HR teams to identify high-risk employee segments.
- Created 10+ DAX measures and KPI cards tracking attrition rate, average tenure, and department-level metrics; used slicers for dynamic filtering.
- Identified that Sales department employees had a 2.1× higher attrition rate vs. R&D, providing actionable workforce retention insights.
- Technology Used: Microsoft Power BI, Power Query, DAX.

TECHNICAL SKILLS

Programming Languages: Python, SQL (SQL*Plus)
Machine Learning: Regression, Classification, SVM (SVC, SVR), Decision Tree, Random Forest, XGBoost, KNN, Feature Engineering, Hyperparameter Tuning (GridSearchCV), Model Evaluation, Scikit-learn Pipelines.
Statistics: Descriptive & Inferential Statistics, Hypothesis Testing, Regression Analysis, Probability
Big Data: Hadoop, HDFS, MapReduce, PySpark
Data Warehousing: Snowflake
Data Analytics: Excel, Power BI, Power Query, DAX, Data Cleaning, EDA, ETL, Data Visualization
Python Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn
Tools: VS Code, Jupyter Notebook, Git, GitHub
